

RESUSCITATION IMPROVEMENT ESSENTIALS

CPR ADVANTAGE COURSE

Overview

Along with early defibrillation, high-quality CPR is one of the most important interventions during cardiac arrest. However, this life-saving skill is often performed sub-optimally—and rarely measured. The one-day CPR Advantage course will cultivate and enhance a culture of high-quality CPR within services currently using ZOLL X Series® defibrillators with CPR feedback.

Objectives

- Address the clinical definitions and current science of “high-quality CPR” and why it is crucial for survival from cardiac arrest.
- Maximise the clinical benefits of ZOLL equipment, specifically pertaining to CPR quality with:
 - Super-user training on ZOLL X Series
 - Best practices, techniques and tips to achieve high-quality CPR.
- Learn how ZOLL RescueNet® software will give the knowledge to provide valuable quantitative CPR quality feedback.
- Participate in extensive cardiac arrest scenarios that will focus on CPR skills.
- Receive debriefing and quantitative feedback utilising RescueNet software.

Course content

- Introduction and course overview
- High-quality CPR Instruction: Definitions, clinical evidence, and impact potential
- Practical use of the X Series
- CPR Benchmarking and data collection
- Using CPR feedback to improve compression quality
- CPR Benchmarking results
- RescueNet software overview
- Putting It All Together: Cardiac arrest scenarios with RescueNet debriefing

- Exclusively for ZOLL X Series users
- One-day course for 8-16 clinicians
- Enhance practice to help improve outcomes
- No additional charge
