

THE ROAD TO IMPROVING RESUSCITATIVE CARE: EMS ROADWAYS

Improving quality of care and patient outcomes is one of the primary goals of all EMS agencies. But you can only improve what you measure. Whether you are manually ventilating or performing chest compressions on a patient, you can't improve without metrics. And you can't be sure you are meeting current ERC Guidelines requirements.

EMS Roadways will show you ways to measure and improve your resuscitative care. This no-cost, one-day clinical consulting program consists of benchmarking and resuscitation simulation modules to give a snapshot of your service's performance:

- The EMS crews will be able to practice their compression and ventilation skills on data recording devices, both before and after feedback. All we require is a maximum of 15 minutes of their time, and we will give them a quick overview of their individual performance.
- Leadership will be debriefed on the results of the data collected during the program to assist with continuous quality improvement through a data-driven, performance-based approach.

The EMS Roadways program can be conducted in a stationary setting (a fixed training day) or taken mobile to several stations to encourage participation of on-duty crews. Invest your time and benchmark yourself and your team.

This program is provided at no cost. For more information about the EMS Roadways program, contact your ZOLL representative.

- The course will be conducted by ZOLL's Clinical Support Team.
- The Clinical Support Specialists are ALS/PALS-trained clinicians (Paramedics, RNs, or RTs) with extensive experience running and debriefing trainings and workshops.
- Program content includes:
 - CPR quality benchmarking
 - Ventilation quality benchmarking
 - Resuscitation simulations
- No ZOLL® equipment is needed to participate
- No future commitment to ZOLL is required
